PROFESSIONAL SUMMARY

Software Developer specializing in PHP and Laravel with hands-on experience designing and developing scalable, secure, and high-performance web applications. Strong expertise in MVC architecture, RESTful API development, MySQL database design and optimization, payment gateway integrations, and WordPress/WooCommerce development. Skilled in building robust backend systems, integrating third-party services, and developing maintainable full-stack solutions. Strong focus on clean code, system performance, scalability, and delivering reliable software solutions that align with business requirements.

WORK EXPERIENCE

Infinite Open Source Solutions

Feb 2025 – Present

Software Engineer – Laravel

- Developed and integrated APIs across both the Laravel admin interface and WordPress WooCommerce platforms, enabling seamless cross-system functionality and real-time data synchronization.
- Engineered secure financial transaction flows by integrating payment gateway APIs, implementing pay-in functionalities within WordPress WooCommerce and developing robust pay-out systems in the Laravel backend.
- Refactored and optimized existing codebases using OOP principles, establishing a clean, well-structured MVC architecture to improve maintainability and reduce onboarding time for future developers.
- Developed and maintained scalable web applications using the Laravel framework, significantly enhancing overall system efficiency and accelerating page load times.
- Performed comprehensive database design and optimization using MySQL, improving query response times for high-volume data retrieval.
- Collaborated with cross-functional teams in an agile environment to gather requirements, ensure code quality, and successfully deliver critical features on schedule.

BTRAC (Business Technology Research & Analytics Centre)

Jul 2023 – Jan 2025

Software Developer

- Developed and maintained robust backend web applications using PHP Laravel, focusing on high scalability and long-term maintainability for end-users.
- Utilized Laravel's Eloquent ORM for efficient database management and complex SQL query handling, optimizing overall data flow and reducing server load.
- Managed database migrations, version control, and collaborative workflows using Laravel's built-in tools and Git.
- Enhanced application security through industry best practices, effectively mitigating vulnerabilities and safeguarding sensitive user data.
- Deployed and managed production applications on the Hostinger hosting platform, ensuring high availability and consistent server uptime.
- Developed and customized dynamic and e-commerce WordPress websites with tailored themes and plugins for diverse clients.
- Managed DNS, domains, and hosting environments via Namecheap and Hostinger, ensuring reliable performance and seamless client handoffs.
- Designed responsive, visually appealing front-end interfaces compatible across all devices, boosting user engagement and mobile accessibility.

CORE COMPETENCIES & TECHNICAL SKILLS

Core Competencies: Backend Development, MVC Architecture, API Development, API Integration, Object-Oriented Programming (OOP), Database Optimization, E-Commerce Solutions, Payment Gateway Integration

Programming Languages: PHP, JavaScript, Python

Web Technologies: HTML5, CSS3, Bootstrap

Frameworks & CMS: Laravel, WordPress, WooCommerce

Database: MySQL, Relational Database Management Systems (RDBMS)

Version Control & Tools: Git, RESTful APIs

Hosting Platforms: Hostinger, Namecheap

AI-Assisted Development & Tools: AI Pair Programming (GitHub Copilot, Claude, ChatGPT), Prompt Engineering, AI Code Review & Debugging — leveraging AI tools to accelerate development, streamline implementation, and improve debugging efficiency, boosting overall productivity.

PROJECTS

BulkApply – Job Application & Email Scheduling Platform

Laravel | React.js | MySQL

Full-stack platform enabling candidates to bulk apply for multiple job vacancies in one workflow. Laravel backend exposes RESTful APIs for vacancy listing and application submission; scheduled email automation via Laravel Queues & Scheduler. React.js frontend with multi-select apply flow and real-time application status tracking.

RestoFinder – Location-Based Restaurant Discovery

Laravel | Geolocation API | MySQL

Laravel-powered restaurant discovery platform where users search by GPS location or custom address to view nearby restaurants with ratings, distance, and menus. Integrated Geolocation & Maps API for real-time proximity search; optimized MySQL queries for fast location-based filtering.

IntQ – AI-Powered Interview Preparation Platform

Laravel | AI Integration | MySQL

Interview prep tool where candidates upload their resume and skills to receive auto-generated, role-specific Q&A. Built on Laravel with AI API integration; implemented resume parsing and skill extraction to tailor output per candidate profile.

WordPress Shop It – E-Commerce Website

WordPress | WooCommerce | Freelance

WooCommerce e-commerce platform with payment gateway integration, product catalog, and shopping cart. Managed end-to-end deployment including domain, DNS, and hosting via Namecheap and Hostinger.

Turf Booking Application

PHP | JavaScript | MySQL | Academic

Full-stack turf reservation system with booking management, availability logic, and secure user data handling using PHP, JavaScript, and MySQL.

EDUCATION

- BSc Computer Science – Kannur University, 2018 – 2021
- 12th Board – Kerala State Board, 2017 – 2018
- 10th Board – Kerala State Board, 2015 – 2016

CERTIFICATIONS

- PHP (Hypertext Preprocessor) Certification – Gtec, 2023
- Python Data Science with AI Expert – Expertz Lab, 2021 – 2022

LANGUAGES

English, Malayalam, Hindi
